

***Amendments to the Specification***

Please insert FIG 7A-7C, attached hereto, into the drawings section of the specification.

Please insert the following paragraph after paragraph 0047, found on page 19 of the specification as filed:

FIGS 7A-7C. This figure depicts the DNA sequence, which encodes a wild type M-MLV reverse transcriptase having DNA polymerase activity and substantially no RNase H activity. Also shown is the corresponding amino acid sequence. Position 0 of FIG 7A is the codon ATG, which encodes a methionine residue. The methionine residue is the initiation codon for the recombinant DNA sequence. Thus, position 0 of this sequence does not represent an amino acid residue present in the wild type M-MLV reverse transcriptase having DNA polymerase activity and substantially no RNase H activity.
